Foreword	9
1. Fundamental terms, definitions and tools	13
1.1. Electromagnetic environment	13
1.1.1. Perception and consequences of embedding in the environment	13
1.1.2. European regulation relating to electromagnetic compatibility .	16
1.2. dB, or not dB, that is the question	19
1.2.1. Floating decibels	19
1.2.2. Bonded decibels	21
1.3. Electrical dimension	23
1.4. Power (impedance) matching	25
1.5. Scattering matrix	30
1.5.1. Insertion loss versus voltage loss	31
1.5.2. Derivation of a one-port impedance	33
1.6. Modal description of transmission lines	35
1.6.1. Delta-T transposition	35
1.6.2. Modal circuit	36
1.6.3. Decomposition of currents in multiwire lines	39
1.7. What actually R, L, C one-ports are?	40
1.7.1. Wire wound resistor	41
1.7.2. Metal film resistor	42
1.7.3. Film capacitor	43
1.7.4. High frequency choke	44
1.8. In bush of the pulse parameters	45
1.8.1. Measurable pulse parameters	46
1.8.2. Calculable pulse parameters	46
1.9. Waveforms in the time and frequency domain	47
1.9.1. Fourier series	47
1.9.2. Fourier integral	50
1.9.3. Amplitude Modulation	50

2. Low-frequency current and voltage disturbances	55
2.1. Current harmonics	56
2.2. Flicker	57
2.3. Characteristic of main's voltage	60
2.3.1. Harmonics	60
2.3.2. Unbalance	61
2.3.3. Dips and interruptions	63
2.3.4. Commutation notches	64
2.4. Solar storm	65
3. Radio-frequency electromagnetic disturbances	69
3.1. Sequence of toggled DC voltage	69
3.1.1. Rectangular waveform	69
3.1.2. Pulse modulation, radar pulsing	72
3.1.3. Trapezoidal waveform	74
3.1.4. Damped oscillatory waveform	77
3.2. Single events – pulses	80
3.2.1. Electric discharge in gases	80
3.2.2. Spectral density of triangle pulse	84
3.2.3. Discharge of static electricity	86
3.2.4. Electric fast transients BURST	90
3.2.5. Lightning discharges	92
3.2.6. Nuclear/High-altitude ElectroMagnetic Pulse	97
3.3. Relevance of the frequency bandwidth BW	101
4. Propagation of disturbances	103
4.1. Examples of unsymmetrical and symmetrical transmission	104
4.2. Galvanic coupling	106
4.2.1. Internal impedance of round wire	108
4.2.2. Internal impedance of conductor with rectangular cross section	111
4.2.3. Precedence of rectangular over round wire common return path	113
4.3. Electric (capacitive) and magnetic (inductive) coupling	115
4.3.1. Capacitive coupling	115
4.3.2. Inductive coupling	116
4.3.3. Dependence of capacitance and external loop inductance on cross section's shape	117
Capacitive and inductive coupling by symmetrical transmission	119
4.3.4. Transverse to longitudinal conversion	120
Decomposition of currents into common and differential mode	122

4.4. Wave coupling	124
4.4.1. Radiated waves	124
Idealized entities as elementary radiators	124
Field probes	129
Antennas	131
Reciprocity theorem	149
Unintentional antennas	150
4.4.2. Guided waves	152
5. Protection from disturbances	157
5.1. LF filtering	157
Passive filters	157
Active filters	159
5.2. RF filtering	160
5.2.1. Overlying the useful voltage with disturbances	160
5.2.2. Ingredients of filters	162
5.3. Non linear suppressors	169
5.4. Shielding	173
5.4.1. Static and quasi-static fields	174
Metal shields	174
Shielding with diamagnetics and ferromagnetics	177
5.4.2. RF shielding in the far field zone	179
Feed-throughs and apertures in RF shields	188
5.4.3. Cable shielding	189
5.5. Miscellaneous	193
5.5.1. Potential bonding vs. galvanic separation	193
5.5.2. Cable shield termination	195
5.5.3. Cabling with improved electromagnetic compatibility	196
Twisted pair	196
Ribbon cable	198
Cable layout	198
Bibliography	201
List of abbreviations	205
Index	207
